                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                osteoporosis; or (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postmenopausal osteoporosis glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, druginduced abnormalities in bone formation or bone loss, conditions that involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated cDM marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation i osteoblasts, or bone tissue deposition; (b) diagnosing abnormal deposition of bone tissue, abnormal rate of osteoblast formation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-DEC-2000; 2000US-0255882P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ARKS4951 to ARK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in ARM62170 to ARM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynuclectides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynuclectides may be used to produce the secreted (II, by inserting the CC protein. (I) proteins and polynuclectides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic concerns and cancer metastases of haematopoietic antigen genomic concerns from the present invention. ARK54992 to ARK64703 and AAM62169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel human respiratory antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, consilittis, and laryngitis), lung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polymucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAS28161-AAS28764 represent genomic sequences encoding for novel human respiratory antigens. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention describes an isolated polypeptide (I) comprising an amino CC acid sequence that is at least 90% identical to polypeptide fragment of any one of 299 respiratory system antigen sequences (PS) and having CC biological activity, polypeptide domain or epitope of PS, (II)-length (II) encoding (I) is also useful for diagnosing a CC pathological condition or a susceptibility to a pathological condition or a susceptibility to a pathological condition of in (II) or determining the presence or absence of mutation CC in (II) or determining the presence or amount of expression of (I) in a CC diagnosing a pathological sample and diagnosing a pathological condition based on the CC diagnosic are useful in diagnosis. Treatment, prevention and/or CC diagnosis of disorders of respiratory system associated polynucleotides, the prognosis of disorders of respiratory system such as throat disorders (e.g., pneumonia), altergic disorders (e.g., asthma and ecsinophilic sarcoidosis, nose disorders (thinitis and sinusitis), neoplasms and/or cancers of respiratory tissues (e.g., asthma and ecsinophilic sarcoidosis, nose disorders (thinitis and sinusitis), neoplasms and/or cancer of the nose). The polynucleotides are useful in gene therapy techniques, for chromosome identification, identifying individuals from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention is related to a novel isolated polypeptide, which comprises a human respiratory system-related polypeptide, and the DNA sequence which encodes it. The invention may be useful for the development of compounds with an antiasthmatic, antibacterial, antiinflammatory, cytostatic, antianaemic or antiallergic activity. In addition, the sequences disclosed may be useful for gene therapy. The polypeptide or polynucleotide is useful for treating, preventing or ameliorating a medical condition, for example pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, anaemia, leukaemia, inflammations, sinusitis, chronic obstructive pulmonary disease or infectious diseases. The polypeptide or polynucleotide is also useful for diagnosing any of these diseases or a susceptibility to the disease. The present sequence is that of a human DNA sequence which is related to a human reservier or vertem associated cone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human respiratory system-related polypeptide and genes, useful treating, preventing or diagnosing e.g. pneumonia, lung cancer, cys fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      individual to joint space narrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polynucleotide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polynucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the princed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Determining susceptibility of an individual to joint space narrowing, osteophyte development and/or joint pain comprises identifying whether the individual has at least one polymorphism in a polymucleotide encodition.

                                                 The present sequence is a gene encoding human myelin oligodendrocyte glycoprotein which is a nervous system-specific antigen. The antigen or peptides derived from it activate T cells in vivo. The present sequence is used to promote nerve regeneration or to prevent or inhibit neuronal degeneration caused by injury or diseases of nerves within the CNS or PNS. Such injury includes spinal cord injury, blunt trauma, penetrating trauma, haemorrhagic stroke or ischaemic stroke, whilst diseases include diabetic neuropathy, senile dementia, Alzheimer's disease, Parkinson's
                          Human; myelin oligodendrocyte glycoprotein; MOG; NS-specific antigen; nervous system-specific antigen; T cell; peripheral nervous system; PNS central nervous system; CNS; nerve regeneration; neuronal degeneration;
                                                                                                                                                                               Claim
                                                                                                                                                                                                       New compositions useful to treat nervous system traumatic injury, Alzheimer's disease etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                            26-JUL-2001.
                                                                                                                  WO200153312-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human polymucleotide SEQ ID NO 5031.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 672; 199pp; English.

                                                                                                                                                                                                                                                                                                                       immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          with a test agent, and determining if the test agent modulates the expression of the gene or biological activity of the polypeptide encoded by the gene. Also described are: detecting a fibrotic disorder in a subject; modulating gene expression in fibrotic tissue; and an array comprising a substrate having addresses, where each address has a capture probe that can specifically bind at least one polymucleotide that is differentially expressed in fibrotic disorders, or its complement. The method is useful in identifying a modulator of at least one gene that is differentially-expressed in fibrotic tissue or during fibrogenesis, or a differentially-expressed in fibrotic tissue or during fibrogenesis, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antiinflammatory; gene therapy; therapeutic; diagnosis; uterine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide encoded by the differentially-expressed gene, in a cell population for preparing a composition for diagnosing or treating fibrotic disorders, e.g. uterine fibrosis. This sequence represents a polynucleotide associated with detection and treatment of fibrotic disorders. Note: This sequence does not appear in the printed specification but has been obtained in electronic format directy from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a method of identifying a modulator of at least one gene that is differentially-expressed in fibrotic tissue or during fibrogenesis, or a polypeptide encoded by the differentially-expressed gene, in a cell population, comprising contacting the cell population with a test agent, and determining if the test agent modulates the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying a modulator of a gene that is differentially-expressed in fibrotic tissue or during fibrogenesis, or a polypeptide encoded by the gene, in a cell population by contacting the cell population with a test

                                                             Query Match
                                                                                                                                                                 The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for treating carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma are propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent useful as patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human genomic

reconfiastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL6164 (to ABL70110), or is at least 95% identical to (S), where a change in comprises a sequence of anti-neoplastic activity. (I) has cytostatic expression is indicative of anti-neoplastic activity. (I) has cytostatic cativity and can be used in gene therapy. MI can be used for screening an expression is the data is sufficient to convey the chemical structure and/or of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, concer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cancer, infiltrating lobular cancer, squamous cancer, infiltrating neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel reagent for diagnosis, molecular CC definition and therapy of chronic inflammatory joint diseases, and other CC inflammatory disorders, infective or tumour diseases in humans. The CC products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be CC used for gene therapy. The reagent of the invention and any proteins and CC used for medical diagnosis; (ii) for diagnosis and characterisation of CC chronic joint diseases, on the basis of molecular characterisation, and CC etermining the etiological pathogenicity principle of as yet cuncharacterised inflammatory diseases, also monitoring progression and/or CC treatment of disease, and optimisation of therapy and (iii) for CC treatment of disease, and optimisation of therapy and (iii) for CC treatment of disease, and optimisation of therapy and (iii) for CC treatment of disease, and optimisation of therapy and valuation of CC treatment of disease, and optimisation of therapy and valuation of the method of the invention

The invention relates to a kit for determining predisposition of a cubject to developing post-traumatic stress disorder (PTSD) comprising at least 10 and no more than 574 polynucleotides, where each of the computation of a composition of the computation of the polynucleotides is capable of specifically binding at least one specific cited computising the polynucleotides cited, and a microarray computising the polynucleotides cited, and a microarray computising considered computation of the polynucleotides and a microarray computation of the coligonucleotides is capable of specifically binding at least one specific polynucleotide sequence. The kit computation of the polynucleotides selected from an oligonucleotide molecule, a cDNA molecule, a genomic considered from an oligonucleotide molecule, a cDNA molecule, a genomic considered from an oligonucleotide molecule, a cDNA molecule, a genomic considered from an oligonucleotide molecule, a cDNA molecule, a genomic considered from an oligonucleotide molecule, a cDNA molecule, a genomic considered for molecule and an NNA molecule. Each of the polynucleotides is at least one reagent constable for detecting hybridization of the polynucleotides and at least constable for detecting hybridization of the polynucleotides and at least considered for using the kit in determining predisposition of a packaging the kit in ferminate to developing PTSD. This sequence considered for the manufacture of a medicament identified for the polynucleotide of the invention. Note: The sequence considered for the polynucleotide of the polynucleotide sequence.

                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention
                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders digestive system, particularly cancer and cancer metastases.

The invention relates to novel genes (AAI62752-AAI62961) and proteins CC (AAM42347-AAM42415) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, concern the general gland, bone, bone marrow, consider the general gland, bone, bone marrow, consideration, autoimmune haemolytic consense, general, autoimmune haemolytic consultiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cc anaemia, autoimmune they colitis; (c) cc anaemia, autoimmune they colitis; (c) cc anaemia, autoimmune haemolytic consideration sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cc multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cc infections diseases e.g. cerebral anoxia and epilepsy; and (f) confections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly constructed the printed specification, but was obtained in electronic format directly constructed the printed specification, but was obtained pot sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel plasma membrane associated proteins useful for diagnosing, treating, preventing and/or prognosing disorders related to the including cancer, immune response and neuronal disorders.

Concurodegenerative disease treatment, identifying a risk for a neurodegenerative disease in a test subject. Also included are diagnosing a neurodegenerative disease in a test subject. Also included are diagnosing concurred to a neurodegenerative disease in a subject, screening for a therapeutic concurred to a neurodegenerative disease in a subject, screening for a therapeutic concurred to a neurodegenerative disease treatment in a subject, identifying a risk concurred to a neurodegenerative disease treatment in a subject, identifying a risk concurred to a neurodegenerative disease in a test subject, identifying a risk concurred to a neurodegenerative disease in a test subject, identifying a risk concurred to a neurodegenerative disease in a test subject, a solid support comprising one or more biomarkers, where the biomarker is one or more comprising one or more biomarkers, where the biomarker is one or more concurred disease, ATP-synthase beta chain, concurred to the comprising protein and protein antigen, Prohibitin, Phosphoglycerate mutase 1, concurred transcripts comprising protein RAPIB, concurred transcripts comprising cyclin D1, cyclin B, cyclin G1, weel, hTR2, CDC25b, GSX3 beta, protein kinase c alpha, C5, C1 contichymotrypsin, HSP 27, HSP 90, crystalline, GAPDH, ferritin H, cordinative disease, screening a therapeutic agent for treating a neurodegenerative disease, monitoring a neurodegenerative disease concorression monitoring a response to a neurodegenerative disease

                                                                                                                                                                                                                                                                                          Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              granulocyte activation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; ds; granulocytic cell; DNA chip; bacterial infectio viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis;
       The invention relates to detecting (M1) granulocyte (GC) active (GCA), by detecting the level of expression of gene(s) (GS) ids (GCA), by detecting the level of expression of gene(s) comparing DNA chip analysis as given in the specification, and comparing expression level in an unactivated GC, very control of the control of GCA. Also included the control of the control of GCA included the control of GCA in the cont

An if agent that modulates the expression of gene (s) from Gs in the tissue. M1 is useful for modulating GCA; M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation in a tissue, an allergic response in a subject, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult capsure of a subject to a pathogen or sterile inflammatory disease (e.g. cardiac reperfusion injury, renal reperfusion, protozoal infection, inflammation, and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially conditions. The present sequence represents a gene differentially capable of modulations of the above conditions of the printed specification, but was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to recombinant carcinoma associated (CA) nucleic CC carcin sequences from mouse and human (AbA)1482-AbA03094), and to CC carcinobinant carcinoma associated proteins (CAP) encoded by them. The CC invention also encompasses expression vectors and host cells comprising a CC ch nucleic acid, a polypeptide (especially an antibody) that specifically compasses to the protein, and a biochip comprising CA nucleic acid or CC fragments thereof. The sequences of the invention were identified using CC oncogenic retroviruses, which insert into the genome of the host organism CC at random. Many of these do not carry transduced host oncogenes or CC pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host CC protooncogenes. The CA nucleic acid sequences can be used to diagnose CC carcinoma (especially breast cancer, prostate cancer, lymphoma or CC elukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular CC tissues. CA nucleic acids, proteins and antibodies are also useful as CC therapeutic agents and in screening and evaluating drug candidates. The CC present sequence represents a specifically claimed human CA nucleic acid Sequence of the invention. Note: The complete sequence data for this CC patent did not form part of the printed specification, but was obtained CC in electronic format directly from WIPO at CC fro, without into the sequences.
                                                                                                                                                                                                                                                                                                                                                                                  Matches 200;

A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 340; 2304pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancers, neoplasm, adenocarcinoma, or sarcomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant nucleic acid, useful for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a recombinant nucleic acid comprising a nucleotide sequence selected from any of the fully defined carcinoma-associated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytostatic; gene therapy; vaccine; cancer; carcinoma-associated secreted; transmembrane; intracellular; ds.

RESULT 45 ADM74369/c

ADM74369 standard; DNA; 44075 BP

```
cy method of diagnosing carcinoma comprises determining the expression of cy one or more genes comprising the nucleic acid sequence in a first tissue type of a first individual and comparing the expression of the gene from type of a first individual and comparing the expression of the gene from cy unaffected individual, where a difference in the expression indicates chat the first individual or a second cy unaffected individual, where a difference in the expression indicates chat the first individual has carcinoma. A method of inhibitor to the CAP. Treating carcinomas comprises administering to a patient an inhibitor of CAP. Comprises binding an inhibitor to the CAP. Treating carcinomas comprises administering to a patient an inhibitor of CAP.

CC Neutralising the effect of a CAP comprises contacting an agent specific cy for the CAP. The polypeptide specifically binds to the protein encoded by the nucleic acid. It comprises an antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acids are useful for cy preparing a composition for diagnosing or treating carcinoma e.g., cy leukaemia or lymphoma. This sequence represents a human carcinoma e.g., cy leukaemia or lymphoma. This sequence represents a human carcinoma conditions and conditions are useful for this patent did not form part of the printed specification but was cobtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to new recombinant nucleic acids. The invention CC also relates to a host cell comprising a recombinant nucleic acid or cexpression vector, an expression vector comprising a recombinant nucleic cc acid, a recombinant protein, a method of screening for drug candidates, a CC method of screening for a bioactive agent capable of binding to a carcinoma associated protein (CAP) encoded by a nucleotide sequence, a cc method of screening for a bioactive agent capable of modulating the carcinoma drug, a method of evaluating the effect of a candidate cd carcinoma drug, a method of dagnosing carcinoma, a method of carcinoma, a method of neutralising the effect of a CAP and a method of diagnosing carcinoma or comprises defect of a patient, removing a call sample from the patient and determining alterations in the expression or activation of a gare comprises derivation of a sequence. A method of diagnosing the nucleotide sequence. A method of diagnosing the patient and determining alterations in the condition of a gare comprises derivation of a garence. A method of diagnosing the nucleotide sequence. A method of diagnosing carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New carcinoma associated gene or protein, useful for preparing a composition for diagnosing or treating carcinoma e.g., leukemia or

RESULT 46 ACN45134 S 밁 Ś 밁 Ś 뮍 Ś 멼 Matches Best Local Similarity are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (11) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (111) for screening of a bioactive agent capable of modulating the activity of CAP; (1v) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (1x) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for WPI; 2003-328604/31 Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence. 01-MAR-2002; 2002US-00087192 28-FEB-2003; 2003WO-US006235 WO2003073826-A2 Cytostatic; Human genomic sequence hCG31443. 18-NOV-2004 ACN45134; ACN45134 standard; DNA; 49745 Homo sapiens (SAGR-) SAGRES DISCOVERY. 8485 8545 8425 GTCTCAAAAAAAAAAAAAAAAAAAAAA 8399 8605 8665 317 263 203 143 GAGACCATCCTGGCCAACATGGTGAAAACCCCGTCTTTACTAAAAAATACAAAAAATAGCTG 83 GCCTGTAATCCCAGCACTTCGGGAGGCCAAGGTGGGCGGATCACCTGAGGTCAAGAGATC SEQ TGAACCCAGGAGGCAGAGGTTGCAGTGAGCACTCCAACCTGGGCAACAGAGTGAGACTCT 8426 AAGACCAGTCTGGCCAACATGGTGAAACCCCCGCCTCTACTAAAAATACAAAATTAGCTG GCCTGTAATCCCAGCACTTTGGGAGGCCAAGGTAGGTGGATCACCTGAGGTCAGAGGTTC GTCTCAAAAACAACAACAAAAAAAACAAA AGATCGCAGAGTGAGCCGAAATCACAGATC-----ACAGAGTGAGCAGAGTGAGACKCC GGCATGGTGGCAGGCGCCTGTAATCCCCAGCTACTTGGGAGGCTGAGGCAGGAGAATCGCT GGCATGGTGGCACACACCTGTAGTCCCAGCTACTCAGGAGCCGGAGATTGCAGTGAGCTG carcinoma; lymphoma; cancer; Conservative ID NO 1930; Opp; English. The method involves screening for agents that modulate the activity of phosphatidylinositol biphosphate (PIB). The methods are useful for identifying candidate p53 pathway-modulating agents used as therapeutic targets for disorders associated with defective p53 function. They are also useful for modulating p53 pathway in a mammalian cell or for diagnosing or treating a disease associated with defective p53 function, e.g. cancers such as breast cancer, colon cancer, lung cancer or ovarian cancer. Sequences of the invention are useful for in vivo assays to test the activity of candidate p53-modulating agents or to assays to test the activity of pathway process such as apoptosis or cell proliferation. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        05-JUN-2001; 2001US-0296076P

The composition has anorectic activity. The polynucleotide composition may be used in gene therapy to treat the disorders of the invention. The composition is useful for disgnosing obesity related to the presence of a molecular variant of the MCHR1 gene or a susceptibility to the disorder. The MCHR1 protein or polynucleotide is useful for preparing a medicament for treating or preventing obesity related to the presence of a molecular variant of the MCHR1 gene. This polynucleotide prepared to the invention. This sequence is not shown in the specification. It has been taken from the GenBank accession number Z86090 provided in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel diagnostic polynucleotide composit The polynucleotide composition comprises: a sequence encoding a polypeptide with defined sequences given in the specification; a secapable of hybridizing to a melanin-concentrating hormone receptor (MCHR1) gene; a polynucleotide encoding an MCHR1 polypeptide; or a melanin-concentration polypeptide; or a melanin-concentration of the metallication of the metall

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) damino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) cy proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cytostate, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome cytostate affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cytostate acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cytostate and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic della. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic cytostates sequences used in the exemplification of the present invention. AAK54942 to AAK54950 and AAM82169 cytostates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /clone lib="Human lacrimal gland, unamplified: oj"
/note="Organ: Eye; Vector: pCMVSport6; RNA was extracted
from 2 human lacrimal glands. A directionally cloned cDNA
library in the pCMVSpORT6 vector(Life Technologies) was
constructed at Bioserve Biotechnology (Laurel MD)
essentially following the protocols of the SuperScript
Plasmid System full details of which are contained in the
manufacturer's Instruction manual
(http://www.lifetech.com/). First strand synthesis was
carried out using a Not I primer-adapter
[5'-pGACTAGTTCTAGATCGGACCGCCCC(T)15-3']. EST analysis
was performed on the unamplified library at the NIH
Intramural Sequencing Center (NISC)."
